A brief welcome to **HYUNDAI POWER PRODUCTS.**

The selection of HYUNDAI Power Products is extensive, ranging from domestic to professional and heavy duty industrial machines. The machinery is of the highest quality, with innovative features and HYUNDAI quality built in.

We offer a full range of generators, featuring diesel generators for backup and prime power, open frame petrol and LPG generators for professional and commercial use, petrol inverter generators for the leisure market, plus the new power stations for silent power on the move.

The HYUNDAI range is far more than generators. From pressure washers and garden machinery, to air compressors, hand tools and construction equipment. We are always looking ahead to bring the very best machinery to the market.

Distributed by Genpower Ltd, the HYUNDAI Power Products range is in good hands. Sold through a large and growing network of dealers throughout the UK and Ireland, the popularity of HYUNDAI Power Products is growing rapidly. From our 120,000sq ft distribution centre, our company provides products backed by a globally recognisable brand, with sales and technical support second to none, so you can always be safe in the knowledge that your new HYUNDAI Power Product will give you years of reliable use.

All engine driven machines produce Carbon Monoxide, an odourless gas that can kill in minutes. Always operate outdoors and away from windows.

Mulching Function

Why Choose A Robot Lawnmower?

- Healthy lawn - Mulching is essential for putting nutrients and moisture back into your lawn. These help your lawn grow greener and healthier.
- Saves time - Less time mowing and more time enjoying your garden.
- Perfect length - The lawnmower will ensure your lawn is always kept at the perfect length.
- Low running costs - With the latest battery technology, the HYRM1000 uses very little energy.
- Low noise - Can be used without disturbing you or your neighbours.
- No grass to collect - Shreds grass finely back into the lawn.

What Are Submersible Pumps Suitable For?

Submersible pumps are suitable for pumping clean and dirty water and can be used for:

- Draining pools and hot tubs
- Irrigating gardens
- Cleaning ponds
- Clearing flooded areas
- Draining muddy water from wells, tanks, cellars or basins
- Draining pits, sumps and ditches
- Stopping building foundations from becoming submerged

It is recommended that an RCD is always used with a submersible water pump and whenever any electrical products are used near water.
